

Token Issuer – MultiNet Green Tech Solutions

Token Ticker – MNgts
Token Name – MNgts
Token Project Name – MNgts

Today there are countless opportunities to leverage new Blockchain and gain increased efficiency, and competitive advantages.

This whitepaper is not endorsed by any government authority. It is only available on www.MNgts.io and may not be redistributed, reproduced or passed on to any other person or published, in part or in whole, for any purpose, without the prior written consent of MNgts. This whitepaper, in full or part, must not be taken or transmitted to any country where distribution or dissemination of this whitepaper is prohibited or restricted. Persons into whose possession this whitepaper may come are required to inform themselves about and to observe any relevant legal or regulatory restrictions and seek all necessary professional advice. By accessing this whitepaper, you agree to be bound by this requirement.

About this document

This document is provided for your MNgts Investors/People only. Participants are advised to read this document carefully in full and perform due diligence. MNgts Token is a Utility Token, designed for accessing the MNgts platform and mobile application only. It is not intended to be a regulated financial product of any kind. Participants comprehend and fully accept the fact that MNgts Tokens are not securities under any circumstance hence the MNgts Tokens are not to be considered an investment or financial product of any kind.

Unforeseen circumstances might not allow the completion of the project in whole or partially. Acquiring and storing MNgts Tokens involves various risks, in particular, that MNgts.io may not be able to launch its operations and develop its blockchain platform due to risks associated with regulation for ICOs and blockchain-based applications. These are mostly unregulated by governments in various jurisdictions at present. An active secondary market may not be developed for the use and resale of the MNgts Token Therefore the purchase and use of MNgts Token should not be done for speculative usage.

Participants should carefully consider the risks, costs, and benefits of acquiring MNgts Token and, if necessary, obtain independent advice in this regard. The sale of MNgts Token is final and non-refundable. Risks associated with new technology and cryptocurrency tokens, in general, are relatively new and untested technology. Due to this nature, technology-related unforeseen events may occur at any time. Participants comprehend and fully accept all types of related risks involved.

In such case, any person undertaking to acquire MNgts Tokens acknowledge and understand that neither MNgtsinitus.io nor any of its affiliates shall be held liable for any direct or indirect loss or damages caused by such changes and that project parameter, dates, specifications provided as well as other details technical or not could be subject to change without prior notice.

It is important to read all relevant documents and obtain advice before making any decision to purchase the MNgts Tokens. The sale of MNgts Tokens is not available in all jurisdictions and to all purchasers.

MNgts has taken all reasonable care to ensure that the facts stated in this document are true and accurate in all material respects and that there are no other facts the omission of which would make misleading any statement in the document, whether of facts or opinion.

1. Abstract

Ever since the advent of Blockchain in 2008, cryptocurrencies have gained popularity and they are being used by millions of people around the world as a mean of exchange. Being an excellent attribute to store value, these virtual currencies are backed by cryptography that aims to be unbreakable and are supported by various communities. As a result, risks have emerged that if the private keys are lost or if the cryptocurrency owner passes away, this digital fortune will be lost forever. Our aim is to provide a solution to mitigate these risks with an innovative consumer technology that is universal, user-friendly, decentralized and cost effective.

1.1 The Solution

An online research conducted by the MNgts team found that the possibility of losing one's wallet or private key is a major concern and has indeed happened to many individuals. This happens as users typically rely on unsecured key storage methods such as; writing the key on a piece of paper or keeping them in digital forms, such as Microsoft Office files stored on hard disks or USB drives. These methods are perishable, not fail-safe, and are susceptible to the possibility of losing one's key.

"It is very easy to lose crypto," says Martin Davidson, co-founder of Blockchain Centre. He also added that it is impossible to retrieve the lost key as the mathematics involved and the strength of the cryptographic system are what make crypto so safe.

In the unfortunate event of a lost key, financial losses can be total and devastating. Therefore, prevention is imperative as there is "no cure."

All crypto users should take the necessary measures to safeguard their cryptocurrencies, coins, and tokens. That is the core belief of our team. When the ideas and plans emerged, MNgts were born. We aim to transform the inevitable, challenge the irrevocable, and provide an alternative to the traditional by leveraging blockchain technology, for the blockchain community. Our objective is to build a smart designated repository to store private keys and passwords securely, for all crypto- wallet users using Ethereum Smart Contract, File System DLT, and the IPFS protocol.

The MNgts Token is not positioned as a substitute product to replace the traditional or the hardware method that the crypto-wallet users are accustomed to, but rather, it is a complementary product that seeks to provide the crypto-community with an alternative option. Solving a blockchain problem with a blockchain solution.

2. Solution Overview

2.1 MultiNet Green Tech Solutions (MNgts) – Smart Designation Repository

MNgts is a blockchain-based storage application that allows users to encrypt and store a variety of alphanumeric data on a decentralized network. The user data is securely stored on a peer-to-peer network (IPFS) which also ensures that it is only accessible to the designated recipient upon a predetermined inactivity trigger.

Examples of user data that can be stored in our secured environment are passwords, wallet files, private keys, JSON files, UTC files, Keystore files, mnemonic phrases, recovery seeds, and even short text messages.

2.2 How does it work?

MNgts is a Decentralized Application (DApp). The MNgts mobile app acts as an interface between the user and the backend blockchain technology. The MNgts mobile app may be downloaded from the Google Play Store or the Apple App Store. The user sets up the “Smart Designation Repository” with MNgts Token acting as a “key”. The user then defines a pre-set inactivity period based on the MNgts mobile app, for example, 30days or 90-days. When the MNgts mobile app recognizes inactivity, the MNgts Ethereum Smart Contract is triggered, and the private data will be automatically gathered and transferred back to the named designated receiver.

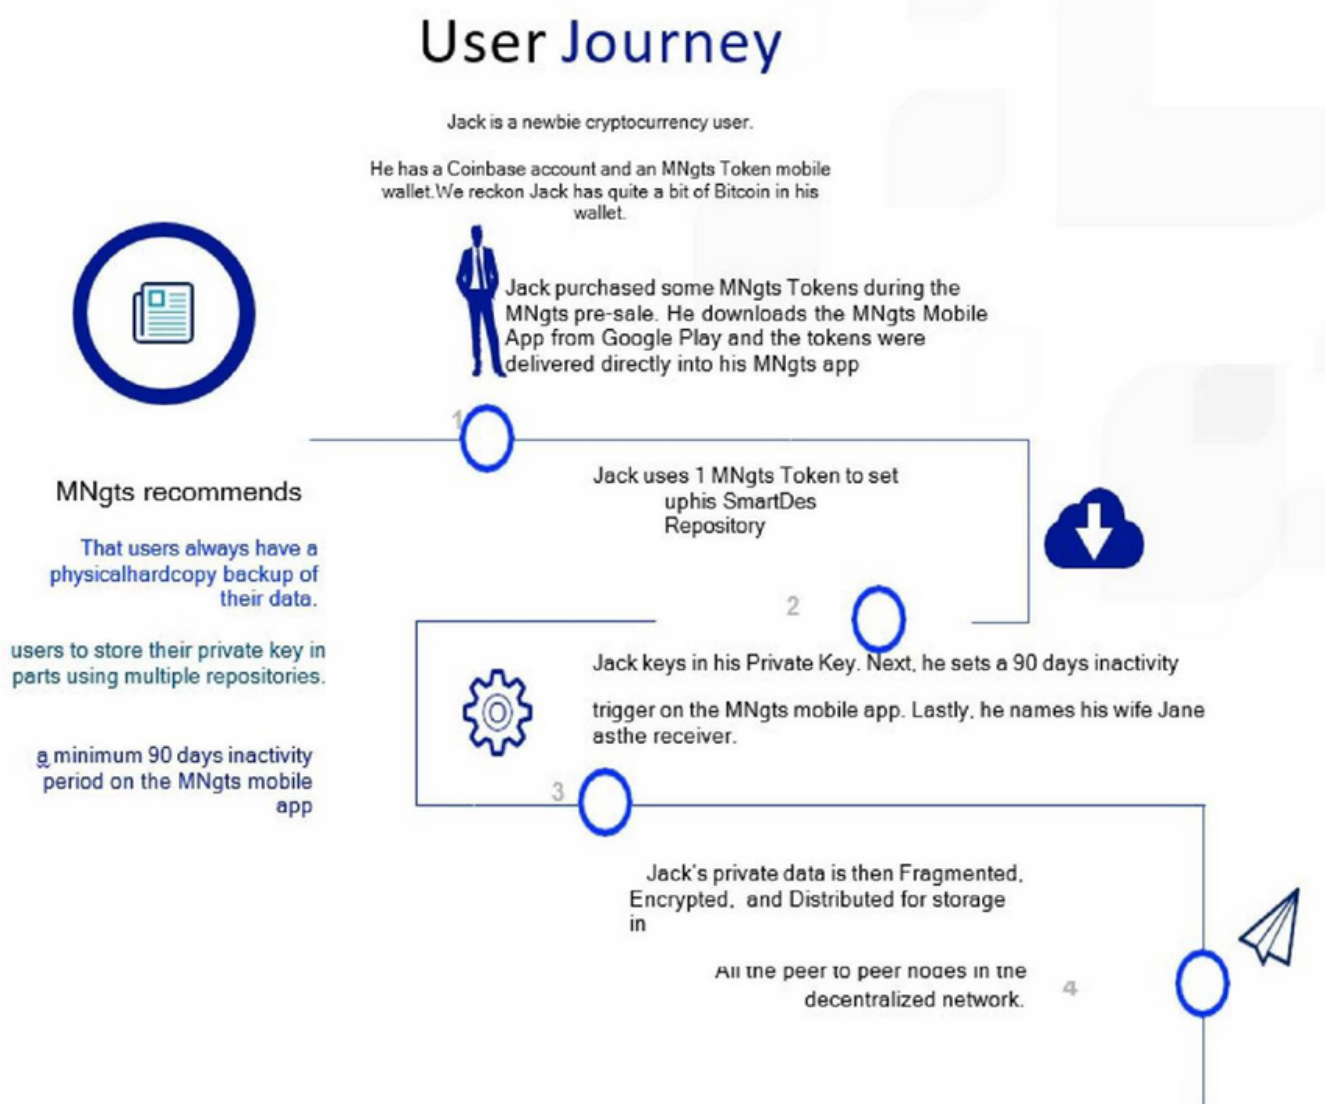

Once the private data is entered onto the MNgts platform, the data will be fragmented, replicated, encrypted, and distributed across the decentralized network via FSDLT Peer-to-Peer Protocol. The decentralized network of nodes is made up of organizations or individuals that are using MNgts's repository services. Files stored are encrypted with AES1024- a military-grade, state-of-the-art encryption program.

The MNgts Ethereum Smart Contract and FSDHT network are linked by the Ethereum blockchain infrastructure which also conduct the verification of pre-set inactivity through the mobile app.

The risk of single-point failure is eliminated with local encryption and fragmentation of data with FSDLT, over the decentralized network. Each network node contains only bits of the fragmented and encrypted data which does not carry any significance on its own. This ensures the security of Information and data on the MNgts network.

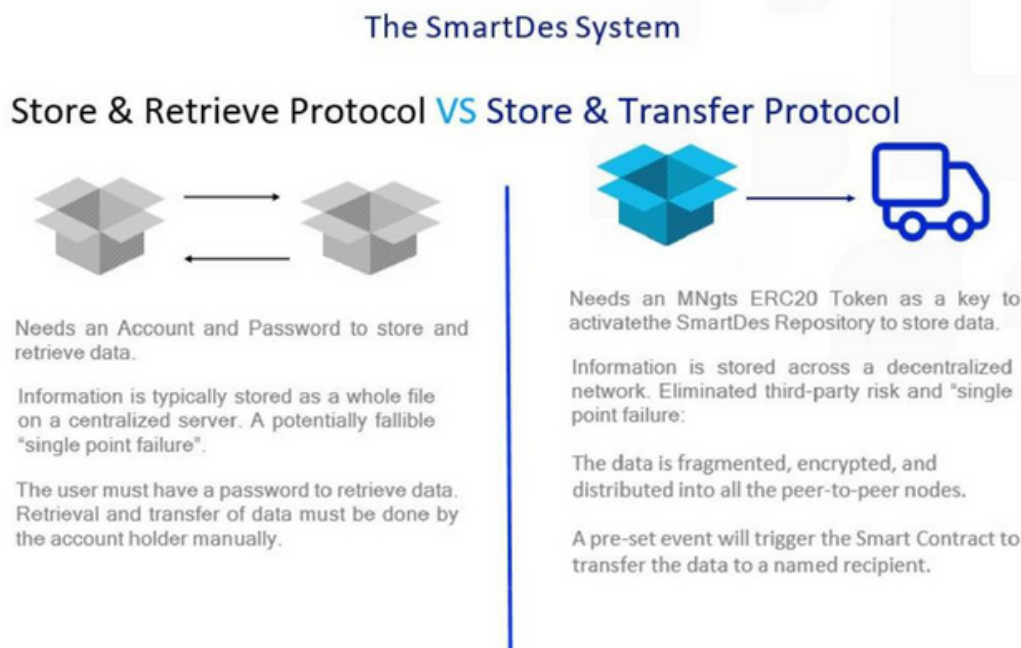

3. User Journey

3.1 The Smart Designation System

Typical Cloud Storage

MNgts Smart Designation Repository System operates on a Store & Transfer Protocol which is in contrast to the traditional Cloud Storage System; which utilizes a Store & Retrieve Protocol. The key distinction lies in the ability of the Smart Contract to detect a triggered event (such as a period of inactivity on the MNgts mobile or a user's social media account) and automatically transfer the user's digital Information to a designated recipient thus behaving like a "Smart Will" or a "Smart Transfer of Wealth"

Infinities is in the process of building up a user base and a community surrounding the project.

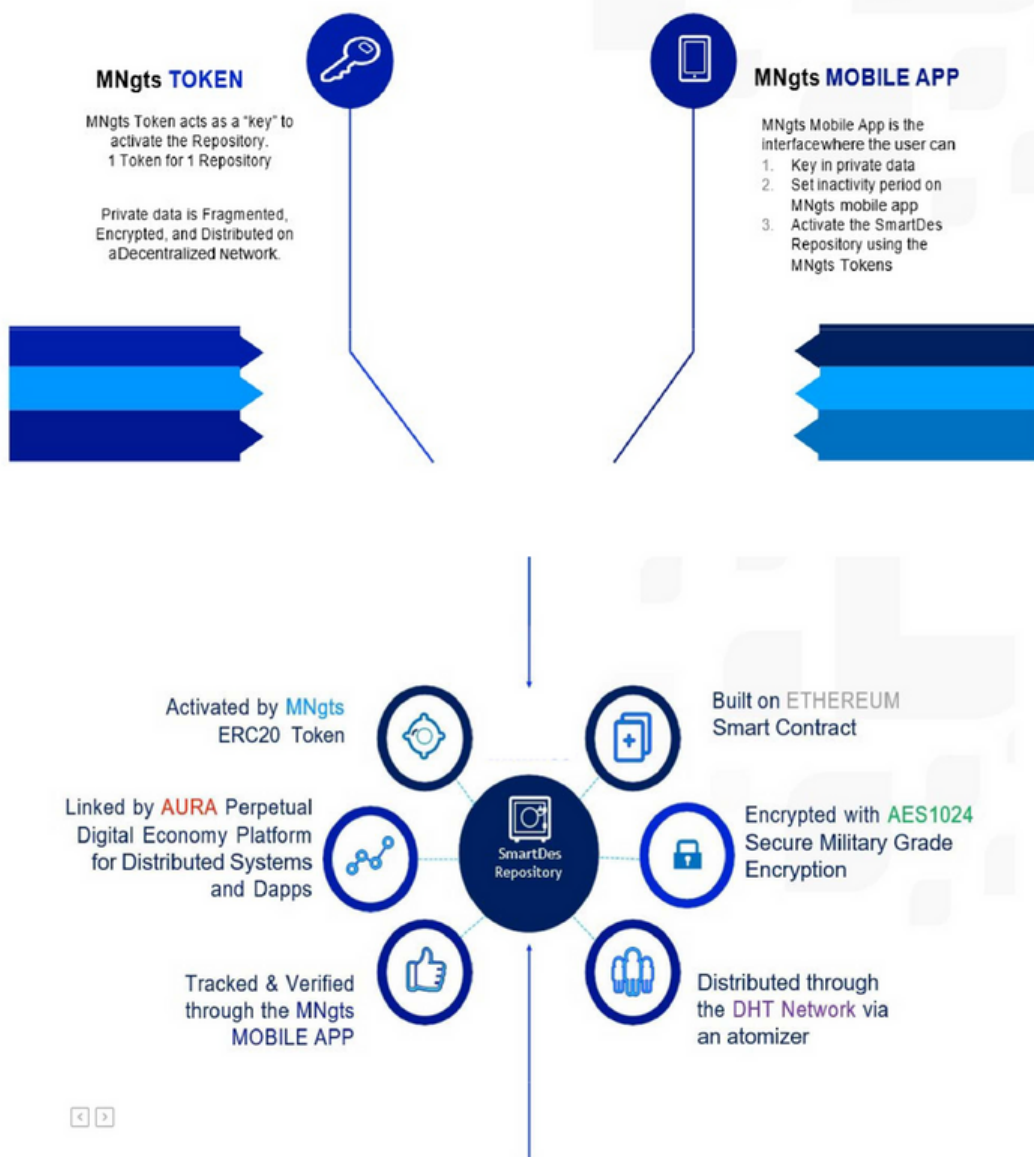

In the near future, MNgts plans to expand its application to other areas relating to Generational Wealth Protection and Smart Will when the Store & Transfer Protocol has been widely adopted by the community.

4. Technical Unveiling of MNgts

Technical Architecture

Built on the Best- in- Class Blockchain Technology Applications

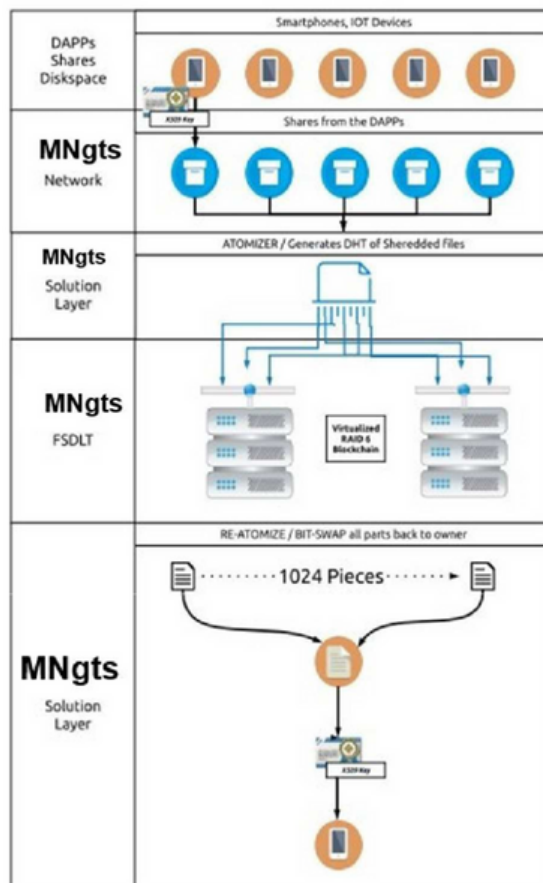

4.1 MNgts Solution Architecture Overview

MNgts solution, built on the FSDLT (File System Distributed Ledger Technology) network & AURA blockchain, consists of three layers: Mobile Application layer, MNgts Solution layer, and Distributed Application (DAPPs) layer. The diagram below shows the architecture of the solution.

AURA blockchain consists of an array of technological layers and protocols. It uses distributed storage and the key innovations are the SHOUT protocol and the FSDLT layer. Each FSDLT block is structured as a file that contains all the necessary components such as the filenames and attributes. Each file and the content within has a unique fingerprint called the cryptographic hash which ensures no duplication across the network and ensures immutability.

The block is stored using IPFS on network nodes. Parallel chaining, FSDLT allows multiple transactions to be processed from a single node. Each node only stores the transactions it has participated in. The SHOUT protocol distributes the transaction Information through the mDHT network. It also helps other nodes locate the necessary information required to complete transactions.

Each transaction needs to pass through a customizable business logic layer similar to a smart contract. Every transaction can be found by human-readable names that use a naming system called IPNS (InterPlanetary Name Service), part of the IPFS framework.

DAPPs Connects to the DHT as Peers

FAT Based on KPV
Then BIT-SWAP is preformed

"The file is separated into 1024 pieces signed with unique X.509 certification and is sent on an FSDLT network by UDP protocol storing in an AURA blockchain, which consists of a number of client's smartphones and Internet of Thing (IOT) devices. Using parallel block processing of the FSDLT network, time-saving transactions are processed.

Every user has a unique X.509 private key for role identification. For the time being, each user who connects to the blockchain will act as a peer. If someone sends a file to the blockchain, the file is encrypted and separated into 1024 pieces of segmented data sent to other peers. At last, when Infinites' smart contract is activated by the user's pre-defined situation, the user can retrieve a file by combing 1024 pieces of fragmented data into a whole file and decrypting it with an X.509 private key."

4.2 Distributed Application Layer (DAPPs)

Distributed application layer is a permissioned ledger, meaning it is a ledger accessible (for reading and writing) by known and pre-approved parties. The Distributed Ledger in the MNgts solution consists of two subcomponents: MNgts Network and MNgts Smart Contract.

4.3 MNgts Network

MNgts network is user pools sharing its 1G disk space divided into odd/even groups. While receiving segmented data from other peers, FSDLT will sort data based on its size, and sending segmented data to odd/even user pools automatically by FSDHT algorithm. mDHT (mainline Distributed Hash Table) network is the name given to the (DHT) used by BitTorrent clients to find peers. AURA is using this peer to peer SHA-3 protocol for distributed node connections. mDHT is a proven stable network.

4.4 MNgts' Smart Contract

MNgts' smart contract provides same integrity and transparency guarantees found in shared ledgers. The smart contract ensures uniqueness of mutually exclusive events and maintains the state of the ledger data. It also serves as assured notification mechanism. Any state change of data or contracts must be notified and must have the assurance that it will be made aware that the state changed has occurred.

4.5 MNgts Solution layer

MNgts solution layer provides an ultimate solution for parties. It consists of two components: FSDLT network, connecting peers to share disk space, and ATOMIZER & RE-ATOMIZE Engine, generating shredded files.

4.6 FSDLT Network

While completion of installing MNgts APPs and registering MNgts wallet to start MNgts' services, it will connect to the FSDLT network by SHOUT protocol, a time-effective UTP protocol, meanwhile, its 1G disk space will be shares to other peers of smartphones and IOT devices.

Simple Heuristic Object UDP Transfer protocol (SHOUT). It is an innovative and efficient protocol for nodal communications between all nodes at once in the AURA platform. It broadcast the transaction request across the network and implements the POR consensus algorithm. It is a lightweight mass connectivity protocol.

4.7 Atomizer Engine (segmentation) & Bit-Swap (transformation)

The functionality of atomizer engine is to divide file into 1024 pieces of data before sending to other peers through FSDLT network.

The Re-Atomizer Engine, on the other hand, will do the inverse process when user attempts to get a whole file from the FSDLT network.

Bit-swap is an exchange component of IPFS (InterPlanetary File System), which is responsible for connecting network, sending data and broadcasting notifications.

IPFS (Inter-Planetary File System) is the peer to peer hypermedia protocol for efficient file storage. Essentially, each file and all of the blocks within it are given a unique fingerprint called a cryptographic hash. Each network node stores only content it is interested in, and some indexing Information that helps figure out who is storing what.

While successfully sending 1024 pieces of segmented data through Bit-swap, mobile application layer will receive a message stream to certificate a service.

4.8 Mobile Application layer

Applications are participant-specific configurations and integrations user interface, providing a variety of features, such as role identification, storing & retrieving private data, customizing own services.

Both IOS and android provide a build-in network connection technology, an API-based library, for role identification, data encryption signed with one-time X.509 certification, and separating data into 1024 pieces in competitive performance. For activating MNgts contract, both IOS and android are using IFTTT to work with its social media applications such as Facebook, Twitter and Snapchat to deliver file.

5. The MNgts Token

The total supply of MNgts Token is 200 million, generated through the Ethereum Smart Contract System. Each MNgts Token has the same value and functionality. MNgts Tokens are non-minable, non-divisible and non-cumulative. MNgts Tokens are required in 1 whole for MNgts's intended function – to activate the MNgts Repository. One MNgts Token “opens” one MNgts SmartDes Repository

Through the sale of MNgts Tokens, the MNgts team aims to raise funds for further research and development (R&D) and improving the basic functions of MNgts. We have planned for ongoing marketing campaigns in the post-ICO phase to maximize awareness and valuation of the MNgts Tokens. The funds raised will also be used for establishing a global marketing team and a technical team to work on the project and to facilitate listings on exchanges for liquidity.

5.1 MNgts Token Allocation

Forty percent of the MNgts Tokens (80 million MNgts Tokens) will be allocated to the community while 40% is allocated for the MNgts Mobile App Native MNgts Token. The remaining 40 percent will be allocated to the MNgts initiators and development team for the technology, resources and effort they have given towards the initial development of MNgts.

A Distributed Ledger Technology (DLT) derives its utility and value from network effects: The greater the number of users, the more valuable the technology. We hope to distribute 12.5 percent of the MNgts Tokens to all our supporters and build up our blockchain community & make MNgts a must-have app for every crypto-wallet user.

Eventually, 100 percent of the MNgts Tokens will be allocated to the community for MNgts to turn into a completely open source project as intended.

5.2 MNgts Token Summary

The following is provided for summary purposes only and does not form a part of any agreement to the purchase of the MNgts Tokens.

Seller	MultiNet Green Tech Solutions
Website:	www.MNgts.io
Token Name:	MNgts Token
Token Type:	Utility Token (ERC20)
Ticker:	MNgts
Project Name:	MultiNet Green Tech Solutions (MNgts)
Project summary:	<p>MultiNet Green Tech Solutions (MNgts) is a blockchain-based decentralized application that allows its users to store encrypted digital data on a decentralized network and transfer their private data to a designated receiver upon a predetermined triggered event.</p> <p>MNgts is launching an initial token sale for its utility token, the MNgts Token ("MNgts") is intended for the use and functions of the MNgts mobile app, MNgts platform, and its peer- to peer network.</p>
Private Sale period:	6 th June 2022 to 20 th June
Total supply of Tokens:	200,000,000
Tokens for Sale for ICO Round:	20,000,000 INF for 10,902 ETH
Token Price:	<p>1 MNgts = 0.0005 ETH or 1 ETH = 1800 MNgts</p> <p>Exclusive of any transaction fees or costs. MNgts Tokens must be purchased as 1 unit. No decimals are allowed. The minimum purchase amount in the public sale is 0.055ETH</p>
Accepted payment methods	<p>ETH is transferred to the digital address specified on the INF Website, payable at the applicable ETH price determined by INF and specified at the time of purchase.</p> <p>INF will ONLY publish the Token Sale Account or Address on its website at http://www.mngts.io.</p>
Further Token Sales	There will not be another Token Generation Event (TGE). MNgts will use the unsold Tokens for future development.
Countries not allowed for participation	Democratic People's Republic of Korea, Bosnia and Herzegovina, Congo, Eritrea, Ethiopia, Iran, Iraq, Lybia, Serbia, Somalia, South Sudan, Sudan, Sri Lanka, Syria, Trinidad and Tobago, Tunisia, Vanuatu and Yemen, and any citizens of a GBX's list of banned countries.
Involvement in other Token Sales	MNgts has not issued any other tokens prior to this Whitepaper.

Project Name: MultiNet Green Tech Solutions (MNgts)

Website:	www.mngts.io
Project summary:	<p>MultiNet Green Tech Solutions (MNgts) is a blockchain-based decentralized application that allows its user to store encrypted digital data on a decentralized network and transfer his private data to a designated receiver upon a predetermined triggered event.</p> <p>INF is launching an initial token sale for its utility token, the MultiNet Green Tech Solutions Token ("MNgts") is intended for the use and functions offers MNgts mobile app, MNgts platform, and its peer- to peer network.</p>
Directors and Management	<p>MNgts confirms that none of its directors or shareholders have been the subject of, or involved in, any of the following:</p> <ul style="list-style-type: none">(a) unspent convictions in relation to indictable offenses;(b) bankruptcies, receiverships, liquidations, administrations, voluntary arrangements of such person or of any company or partnership where such person was a director with an executive function or partner at the time of or within the 12 months preceding such events;(c) any official public incrimination and/or sanctions of such person by statutory or regulatory authorities (including designated professional bodies); or(d) Disqualified by a court from acting as a director of a company or from acting in the management or conduct of the affairs of any company. <p>None of MNgts or any of its directors are involved in any current or threatened legal disputes that may affect MNgts or the status of the Project.</p> <p>The CEO has no further information to disclose.</p>
Advisers, Partners, and Third-Party Service Providers	<p>The compensation arrangements for each of those parties are as follows:</p> <ul style="list-style-type: none">(a) 2 Strategy advisors: Offered MNgts Tokens with a 30-day investing Period.(b) Legal advisors: fiat currency payments based on work performed.(c) Auditors: fiat currency payments based on work performed.(d) Marketing Partners: fiat currency based on work performed. <p>MNgts confirms that there is no affiliation, conflict of interest, or related party transactions with its management team and directors.</p>

Project Development Reporting	MNgts will provide formal updates about the progress of the Project on a quarterly basis via the MNgts website, the official MNgts Telegram Announcement Channel, and the MNgts mobile app
Project Timeline and Roadmap:	Please refer to The Roadmap in Section 7 of the Whitepaper.
Project Use of Contributions for Development	Please refer to Use of Contributions in Section 4 of the Whitepaper
Intra-group Service Arrangements:	All technology and platform are developed and operated by an in-house team. No formal third-party service arrangements have been made. The platform uses many other open-sourced software and technology readily available in the marketplace.
Material Resources:	MNgts has not filed for any IP rights and patents.

6. The Roadmap

Phase 1– The Team and Platform Functions

Q4 2021	Conceptualization <ul style="list-style-type: none"> A blockchain-based solution for all crypto-wallet users
	Business <ul style="list-style-type: none"> Pre-seed Round- MNgts takes off with a pre-seed round raised from reputable VCs in Hong Kong, Singapore, and Israel.
	Product Research & Development <ul style="list-style-type: none"> INF validates the need of the blockchain community Online Research on market needs and competitive analysis.
	Management Team MNgts rounds up the year with a talented and dedicated team joining the management. Co-founders forming the core team with CEO, COO, CMO, CTO.
Q1 2022	Business <ul style="list-style-type: none"> Legal Matters Presale- MNgts engage in pre-sale events across Asia and Europe. Participating in Major Blockchain conferences and events around the world Hong Kong MNgts Token Presale Private Event Kuala Lumpur MNgts Token Presale Private Event at KLCC, Malaysia Singapore MNgts Token Presale Private Event at Intercontinental Hotel Singapore Please refer to our website for more details about the private events.
	Product Research & Development <ul style="list-style-type: none"> MNgts Mobile App is being developed Mobile app basic user functions for UI/UX
	Advisory Board <ul style="list-style-type: none"> Announcing MNgts's Advisory board Adding new Market Advisers as we progress into different jurisdictions.
Q2 2022	Business <ul style="list-style-type: none"> Online Marketing Campaigns and events Marketplace KYC for Token Sale Panel Speaker for the Global Inclusive Blockchain Conference at SUSS, Singapore,
	Token Generation Event <ul style="list-style-type: none"> Token Contract Creation Smart Contract Security Audit
	Product Research & Development MNgts to launch its mobile application MVP version 1.0- <ul style="list-style-type: none"> on iOS and Android platforms, with whitelisting and login functions, press release announcement and MNgts e-wallet to receive airdrop & bounty

Phase 2- Blockchain Functions and Mobile App Development

Q3 2022	Business <ul style="list-style-type: none"> ▪ Explore & expand B2B partnership possibilities with other dApps stores and applications. ▪ Marketing and Promotion of the MNgts mobile app downloadsto the crypto community in Asia and Europe. ▪ Education and collaborations with Blockchain academic symposiums to widen blockchain adoption in the marketplace.
	Token Generation Event <ul style="list-style-type: none"> ▪ Token Distribution to the users
	Product Research & Development Blockchain functions <ul style="list-style-type: none"> ▪ Develop Blockchain Functions, decentralized network, develop Data Encryption Protocol & Dapp active tracking. Enhancing functions of the mobile applications <ul style="list-style-type: none"> ▪ push notification, and news updates for better engagement. Testing, Feedback & Improvements <ul style="list-style-type: none"> ▪ UAT, stress test & performance test. ▪ Finalized security scanning tools which is utilized by investment banks on similar platforms. ▪ Collect and analyze user feedback from the App/Play store
Q4 2022	Business <ul style="list-style-type: none"> ▪ Marketing Campaign in Europe and Asia ▪ Events and seminars to promote the MNgts mobile appdownloads ▪ Online marketing and local communities building activities ▪ Organize educational symposiums for blockchain applications ▪ Collaboration and tied-ups with other dApps
	Product Research & Development MNgts Alpha version MVP product- Mobile App version 2.0: <ul style="list-style-type: none"> ▪ to be launched on October 2022 with ▪ Refined UI & layout & Enhanced security features MNgts Beta version 2.0 product- MNgts Web Platform <ul style="list-style-type: none"> ▪ to be launched on December 2022: Mobile application version 2.1 <ul style="list-style-type: none"> ▪ Enhanced storage and performance and security. ▪ Improve data processing speed and efficiency

Phase 3– Beta Product and Technological Enhancements

Q1 2022	Business <ul style="list-style-type: none">▪ Marketing Campaign in Europe and Asia▪ Events and seminars to promote the MNgts mobile appdownloads▪ Online marketing and local communities building activities▪ Organize educational symposiums for blockchain applications▪ Collaboration and tied-ups with other dApps
	Product Research & Development <ul style="list-style-type: none">▪ Enhance Data Encryption▪ Explore Smart Contract veto functions▪ Validate recipient identity verification function▪ Enhance Dapp social media APIs integration.▪ Explore options to reset passwords and trigger alerts
Q2 2022	Business <ul style="list-style-type: none">▪ Marketing Campaign in US & Latin America▪ Events and Seminar to promote the MNgts mobile app▪ Online marketing and local community-building activities
	Product Research & Development <ul style="list-style-type: none">▪ Explore multi-platform Smart Contract▪ Release responsive website version of the front end to extend coverage for utilize function for MNgts Token.▪ Security functions and enhancements
Q3 2022	Product Research & Development <ul style="list-style-type: none">▪ Enhancements on web version▪ Explore cross chains abilities▪ Extend mobile app features and functions
